

Assignment: Fundamentals of Colour

Topic Introduction

Colour is one of the most powerful elements in design. It can evoke emotions, direct raw focus, establish brand identity, and create visual hierarchy. This module introduces the basic systems of colour organization, contrast principles, and real-world replication applications.

Objectives & Deliverables:

1. Read the provided introductory slides on additive vs subtractive colour models (RGB vs CMYK).
2. Analyze how complementary, analogous, and triadic colour schemes create contrast.
3. Complete the digital worksheet matching primary colour mixes in paint and light.
4. Choose two opposite warm and cool tones, and design a balanced mood board layout.
5. Save your designs and submit your finished PDF to the student dashboard.
